Dear Sir/Madam,

Greeting. Please find my attached resume for the position of Proposal & estimation engineer in your organization. I am particularly interested in this profile opening.

I am having a total work experience of 6 years out of which 4 years in operation field in O &G sector with BPCL & 2 years in AC manufacturing shop floor with Carrier AC.

During this period of 6 years, I always have an inclination towards core engineering field where I can utilize my knowledge, creativity & skills. Sooner or later this ends up at EPCM sector, so I pursued Piping Design Course from MIT Pune, which is finished in Feb '18 where I gain basic technical knowledge for Process Piping design, Layouts, Material Specification, Cross country Pipeline & Fire Fighting system design etc along with related codes like ASME,OISD,IBR etc. I also learn software skills proficiently like PDMS,AutoCAD,Caesar 2 for stress analysis in very short span of time.

I can understand that my previous experience in Petroleum sector Operation may not be relevant for requirement in designing field. But I assure you strongly that I will contribute greatly in my job due to following reasons:

- 1). Having great interest in this field, so I will pick up practical aspect very fast.
- 2). Having good command over basic mechanical & Piping design theoretical concepts.
- 3). Good command over software's like AutoCAD & PDMS.
- 4). As I worked in operation, can work on room for improvement.
- 5). Having good team work capability & excellent communication skill.
- 6). Creative thinking solution related to problems.

Thank you for taking the time to read my application. Kindly provide me an opportunity to face an interview to prove myself. Looking forward for your response.

Nb: Even ready to work as fresher in designing field, if required.

Your Sincerely

Sushant Kapoor
